Art Unit: 1795

Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 is confusing because it recites a single “polarizing electrode” as including a positive electrode and a negative electrode. If both positive and negative electrodes are disposed on a single collector foil, this would produce an internal short circuit. Claims 2-5 depend from claim 1 and would thus likewise be indefinite.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bailey (US 6,287,719) discloses a spirally wound battery with two cells in the spiral. Goebel (US 4,539,272) discloses a stack of spirally wound cells. Snook (US 4,051,304) and Kim *et al.* (US 6,627,343) disclose batteries that contain spirally wound cells disposed next to each other laterally. Coffey *et al.* (US 2004/0258982) disclose a cylindrical battery in which spiral current collectors are embedded in adjacent pellets. Applicant's IDS is noted, but no copies of the foreign references have been received.

Claims 1-5 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action. The prior art cited herein does not disclose a battery with a plurality of cells connected in series through an extended collector foil having a width of at least twice the width of the electrodes of a cell.

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
